“Bringing Green, to the Restaurant Scene”

LACROSSE, WI-INOV8 International is proud to be showing the latest innovation for heating water at the Renewable Energy and Sustainable Living Fair, in Custer, Wisconsin this June 20.

Utilizing the new INOV8 Dual-Fuel Burner, coupled with specially selected components, INOV8 can provide potable hot water for the hospitality industry using the waste vegetable oil that is currently being picked up by waste oil dealers.

Matt Fisher, Project Manager, came to INOV8, with over ten years of restaurant management experience to help focus the scope of this project. “I was constantly looking for cost reductions, and here it is; the technology, the fuel and the need for hot water, talk about win-win,” says Fisher. **“Once business owners realize that our WVO fueled systems typically pay for themselves in less than one year, and that the systems will then save them literally thousands of dollars each year, they will know that WVO is the logical choice for fueling their business.”**

“These systems are unique because they offer solutions to the requirement for hot water and the need to dispose of the waste oil, all in a package that is no larger than their current water heater,” comments George Baldwin, sales consultant. “No additional processing of the waste oil is necessary to facilitate the use of the oil.”

The turn-key system is “carbon neutral” and does not produce any unwanted or deleterious by-products.

This latest adaptation of the Patented INOV8 Multi-Fuel Burner is truly exciting and will be on display June 20-22nd in Booth Number X40. Come and see what all of the Buzz is about, ask Matt or George any questions you may have and see how this can work for your facility.

INOV8 International, Inc. is a Wisconsin based company. Rebecca Faas, President, says, “We have been providing uncompromised technology specifically designed for the challenges of burning various waste oils in a reliable and clean manner with unsurpassed safety for over eighteen years, this is just another example of our commitment to the industry and the environment.”
